

Super Duo Project Rubric

Overview

This rubric is here to help you understand the expectations for how your project will be evaluated. It is the same rubric that the person evaluating your project will use. You should look at the rubric before you begin working on this project and before you submit it.

The criteria include a subset of the Core App Quality Guidelines. You can find the full list of guidelines here: <http://developer.android.com/distribute/essentials/quality/core.html>

How Grading Works

1. Your project evaluator will be able to see all of your code submissions. They will use this rubric to evaluate your code as well as your written responses.
2. Your grade will simply be "meets specifications," "exceeds specifications," or "doesn't meet specifications,"
 - a. You earn "meets specifications" if all criteria in the Required Components section "meet specifications".
 - b. You earn "exceeds specifications" if all criteria in the Required Components section "meet specifications" and you receive "exceed specifications" in at least 2 of the 4 criteria under the Optional Components section.
 - c. Your project "doesn't meet specifications" if any criteria in the Required Components section are graded as "does not meet specifications." In this case, you will have the opportunity to revise and resubmit your work.

The Rubric

To "meet specifications", your app must fulfill all of the criteria listed in this section of the rubric.

Criteria	Does Not Meet Specifications	Meets Specifications
Required Components		

Alexandria has barcode scanning functionality.		
The two errors mentioned in the UX review are handled.		
Football Scores can be displayed in a widget.		
Football Scores app has content descriptions for all buttons, images, and text.		
Football Scores app supports layout mirroring.		
Required Behavior		
App conforms to common standards found in the Android Nanodegree General Project Guidelines		

Optional Components

To receive “exceeds specifications”, your app must fully implement at least two of the following items.

Criteria	Does Not Exceed Specifications	Exceeds Specifications
Extras		
Alexandria’s barcode scanning functionality does not require the installation of a separate app on first use.		
Extra error cases are found, accounted for, and called out in code comments.		
Football Scores also support a collection widget.		
Strings are all included in the strings.xml file and untranslatable strings have a translatable tag marked to false.
