

List of improvements

Sonntag, 28. Juni 2015 16:01

- ☒ Replace naked JSON processing with Retrofit
- ☒ Remove as much warnings as possible
- ☒ Scan through the view ids and put a correct scope as a prefix
- ☒ Move all DB aware information to the contract (atm this information is spread through the app)
- ☒ Keep the expansion of the fixtures saved on a fragment base (currently this is stored in a static field in the main activity)
- ☒ Limit the data load frequency (currently each time a fragment gets created)
- ☒ Implement daily updates of the data (through an Alarm Intent)
- ☒ Add a widget -> Clicking on an item opens the app and selects the correct day
- ☒ Screen mirror check (RTL)
